

MICA SPECIALTY PRIMERS

MICA Pre-Metallization Primers

MICA water-based pre-metallization primers are designed to improve the adhesion of vacuum metallization to various substrates.

BENEFITS

- Water-Based
- Free of VOC's & Solvents
- Improve metallization adhesion to various substrates
- Yield a bright metallized surface
- Higher solids primers can minimize surface roughness; improving metallization barrier properties
- Some products are extensible enough to withstand biaxial orientation processes

POTENTIAL APPLICATIONS

MICA Pre-metallization Primers can help improve adhesion and enhance barrier properties for chip, cookie, cracker, pasta, and other dry-food packaging applications.
